## Korekční faktory GasAlertMicro 5 PID

Korekční faktory pro chemikálie se specifickou hodnotou korekčního faktoru byly určeny experimentálně pomocí nejnovější verze BW PID. Chemikálie s hodnotami korekčního faktoru vyjádřenými jako rozsah (např. Acetic acid 20-24) mají hodnoty, které se mohou měnit podle dávky chemikálie, které byl senzor vystaven, nebo vycházejí ze zkušeností s předcházející verzí senzorů a lamp PID. Symbol “+” znamená, že lze chemikálii detekovat, ale korekční faktor nebyl pro tuto chemikálii experimentálně určen. Symbol “+” se také používá pro chemikálie, které lze detekovat, ale nejsou přítomny jako výpary při standardní teplotě a tlaku (25°C, 1.0 atmosférický tlak). Korekční faktor pro izobutylen je 1.
